

# Expand Your Video Horizons

## DTS XD10 CINEMA MEDIA PLAYER

The DTS XD10 Cinema Media Player is engineered to deliver 10 channels of high quality digital surround sound plus enhanced video for pre-show and alternate media.

Uniquely, the XD10 offers theatre operators the ability to playback pre-show programming, live concert events, alternate content, and high quality digital surround sound, all from one unit.

Offering unprecedented expandability, flexibility and reliability, the XD10 is a full-featured media management solution for today's progressive cinemas.

### Features

- Video pre-show capability with network programming
- DTS 96/24 high resolution audio playback of live concert broadcasts and pre-show material in 5.1 surround sound
- DTS-CSS Access technology for subtitling, captioning, and audio description
- Film soundtracks play back from an internal hard drive
- Up to 10-channel digital sound playback
- Scalable multi-channel audio

### Coming Soon

- DTS Neo:6™ will deliver the power of 5.1 surround sound from any two-channel source
- High-definition video playback capability
